Project Name	Implement Client Script and UI Policy (Incident)	Max Marks	4 Marks

IDEATION PHASE — BRAINSTORM & IDEA PRIORITIZATION TEMPLATE

Client Script & UI Policy (Incident)

Implement Client Script and UI Policy in ServiceNow Incident to control field behavior, validation, visibility, mandatory status and editability.

Step 1: Before You Collaborate

- ✓ Team Gathering Discuss Incident form requirements and field behavior.
- ✓ Set the Goal Identify what should be handled by UI Policy or Client Script.
- ✓ Tool Readiness Prepare the Incident form and test the rules.

DEFINE YOUR PROBLEM STATEMENT

HOW MIGHT WE STATEMENT

How might we configure Client Scripts and UI Policies on the ServiceNow Incident form so that fields respond correctly to conditions, validation is controlled, and the form is easy and consistent for users?

KEY RULES OF BRAINSTORMING

1. Identify Requirements

Determine which Incident fields need dynamic behavior.

2. Aim for Clear Behavior

Define when fields should be mandatory, read-only or visible.

3. Build on Ideas

Combine UI Policies and Client Scripts where appropriate and test.

STEP 2: BRAINSTORM, IDEA LISTING & GROUPING

Group similar concepts, field behaviors and configuration steps into structured clusters.

Client Script

Client-side validation and dynamic actions when Incident fields change.

UI Policy

Control field visibility, mandatory status and read-only behavior.

Testing & Validation

Test different Incident conditions and verify the configured rules.

STEP 3: IDEA PRIORITIZATION MATRIX

Prioritize the project activities in the order needed to configure and verify the Incident form.

Priority	Idea	Purpose
1	Identify Incident requirements	Decide the exact field behavior required.
2	Configure UI Policies	Set visibility, mandatory and read-only behavior.
3	Implement Client Scripts	Add client-side validation and dynamic behavior.
4	Test all conditions	Verify correct behavior for different Incident inputs.
5	Refine the form	Ensure the final Incident form is clear and consistent.

PROJECT OUTCOME

A ServiceNow Incident form configured with suitable Client Scripts and UI Policies so that field behavior, validation, visibility, mandatory status and editability follow the defined Incident requirements.
