

Ideation Phase

Define the Problem Statements

Date	1 October 2026
Team ID	SWTID-2026-8511
Project Name	Implement Client Script and UI Policy (Incident)
Maximum Marks	2 Marks

Customer Problem Statement Template:

A customer problem statement helps the team understand the customer's point of view and focus on what matters. It describes who the customer is, what they are trying to do, what gets in the way, why it happens, and how it makes them feel. A well-written statement guides the team toward the right solution for the ServiceNow Incident form.

Problem Statement Structure (PS-1):

I am	Service desk agent who logs and updates incidents in ServiceNow every day
I'm trying to	Fill in the Incident form quickly and correctly
but	Mandatory and conditional fields are missed, and wrong or incomplete data gets saved
because	The form has no client-side rules (Client Script / UI Policy) to guide, hide, or validate fields
which makes me feel	Frustrated and unsure about the data quality

Reference: <https://miro.com/templates/customer-problem-statement/>

Example:

I am	I'm trying to	But	Because	Which makes me feel
a traveler	book flights on my phone	it takes a long time	the website is not responsive and doesn't have a mobile version	Frustrated

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A service desk agent who creates and updates incidents in ServiceNow daily	Fill in the Incident form quickly and with correct details	Mandatory or conditional fields (e.g., Priority, Assignment group, Resolution notes) get missed and wrong data is saved	The Incident form has no Client Script or UI Policy to validate input and show or hide fields	Frustrated and unsure about the data quality

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-2	A ServiceNow administrator who maintains the Incident form for the support team	Make the form guide users automatically (mandatory fields, read-only fields, alerts) without server-side delays	Users still skip required details and see fields that are not relevant, so incidents are incomplete and slow to resolve	Form behavior is not controlled on the client side, so rules are not applied as the user fills the form	Concerned and overloaded with cleanup and follow-up work
