

Project Design Phase-II

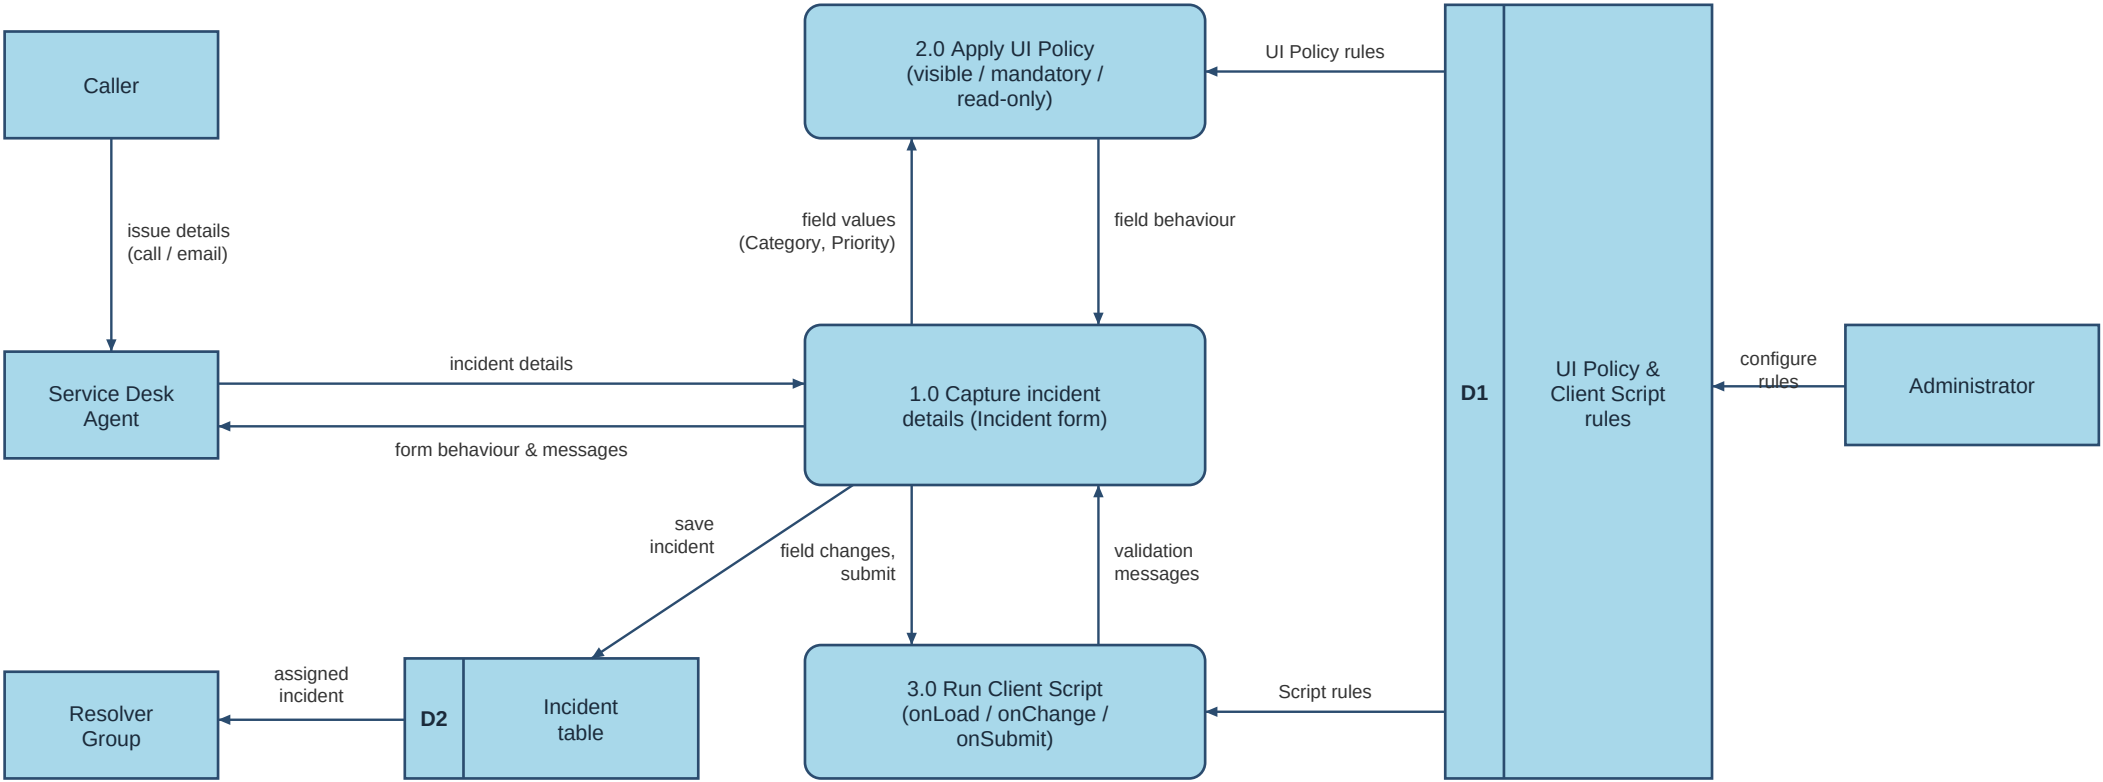

Data Flow Diagram & User Stories

Date	1 October 2026
Team ID	SWTID-2026-8511
Project Name	Implement Client Script and UI Policy (Incident)
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a visual representation of the information flows within a system. It shows how data enters and leaves the system, what changes the information, and where data is stored.

DFD Level 0: Incident form with Client Script and UI Policy

Flow

1. The caller reports an issue and the service desk agent opens the Incident form.
2. The agent enters the incident details. The form applies the UI Policy to show, hide or require fields.
3. The Client Script runs on field changes and on submit to guide and validate the input.
4. The validated incident is saved in the Incident table.
5. The incident is assigned to the resolver group. The administrator maintains the rules in D1.

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Service Desk Agent	Incident Creation	USN-1	As an agent, I can open the Incident form and enter the caller, short description and category.	The form opens and accepts the details.	High	Sprint-1
	Dynamic Form (UI Policy)	USN-2	As an agent, I see only the fields that are relevant to the incident.	Fields show or hide based on Category or State.	High	Sprint-1
		USN-3	As an agent, required fields become mandatory automatically (e.g., Resolution notes when State is Resolved).	The incident cannot be saved until the mandatory fields are filled.	High	Sprint-1
		USN-4	As an agent, fields become read-only once an incident is closed.	Closed incident fields cannot be edited.	Medium	Sprint-2
	Form Validation (Client Script)	USN-5	As an agent, I get an alert when I change a field such as Priority, Impact or Urgency (onChange).	A message appears as soon as the field value changes.	Medium	Sprint-2
		USN-6	As an agent, I get a clear message if details are missing when I submit (onSubmit).	The submit is stopped and the message names the missing fields.	High	Sprint-2
Administrator	Configuration	USN-7	As an administrator, I can create and activate a UI Policy on the Incident table.	The UI Policy is active and applies on the Incident form.	High	Sprint-1
		USN-8	As an administrator, I can create a Client Script (onChange, onSubmit) on the Incident table.	The Client Script is active and runs on the Incident form.	High	Sprint-1
	Testing	USN-9	As an administrator, I can test the rules with a sample incident.	All UI Policies and Client Scripts behave as expected.	Medium	Sprint-3
Resolver Group	Incident Quality	USN-10	As a resolver, I receive incidents with complete and correct details.	Assigned incidents have no missing mandatory fields.	Medium	Sprint-3
