

User Acceptance Testing (UAT) Template

Date	Oct 1, 2026
Team ID	SWTID-2026-8511
Project Name	Implement client script and UI policy (incident)
Maximum Marks	

Project Overview:

Project Name: Implement client script and UI policy (incident)

Project Description: Configuration of client scripts and UI policies on the Incident form to control field behavior (mandatory, read-only, visible) and to validate user input on the client side, without a page reload.

Project Version: 1.0

Testing Period: Oct 1, 2026 to Oct 1, 2026

Testing Scope:

Features: UI policy to make fields mandatory, read-only or hidden based on Incident conditions; onChange and onLoad client scripts on the Incident form.

Requirements: Fields respond instantly to the selected State, Category and Priority; users get clear messages for invalid or missing input.

Testing Environment:

URL/Location: ServiceNow instance - Incident form (Incident > Create New)

Credentials (if required): Test user account provided by the project team

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Short description is mandatory on a new incident	1. Open a new Incident 2. Leave Short description empty 3. Click Submit	Form is not submitted; field shows mandatory error	Submission blocked, mandatory message shown	Pass
TC-002	Close notes become mandatory when State = Resolved	1. Open an existing Incident 2. Set State to Resolved 3. Leave Close notes empty and save	Close notes field turns mandatory; save is blocked	Close notes marked mandatory; save blocked	Pass
TC-003	Field becomes read-only when State = Closed	1. Open an Incident 2. Set State to Closed 3. Try to edit Short description	Field is read-only and cannot be edited	Field locked as expected	Pass
TC-004	Hidden field shown for Category = Hardware	1. Open a new Incident 2. Select Category = Hardware	Related field appears on the form	Field displayed on selection	Pass
TC-005	onChange client script alerts on Priority = 1 - Critical	1. Open a new Incident 2. Change Priority to 1 - Critical	Alert/message is displayed immediately	Message displayed without reload	Pass
TC-006	onLoad client script runs when form opens	1. Open any Incident record	Script executes and sets default field behavior	Default behavior applied on load	Pass
TC-007	Negative: UI policy reverses when condition no longer true	1. Set State to Resolved 2. Change State back to In Progress	Close notes returns to non-mandatory	Reversed correctly	Pass

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	Mandatory asterisk not shown on Close notes until the form is saved	1. Set State to Resolved 2. Observe Close notes label	Low	Closed	Fixed by re-running the UI policy on load (Reverse if false enabled).
BG-002	Alert for Priority 1 appears twice when the form loads	1. Open an Incident with Priority 1 2. Observe alerts	Medium	Closed	Added a check for isLoading in the onChange script.

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
